To avoid dismissal of the appeal, applicant must file an amended brief or other appropriate correction (see MPEP 1205.03) within **ONE MONTH or THIRTY DAYS** from the mailing date of this Notification, whichever is longer.
EXTENSIONS OF THIS TIME PERIOD MAY BE GRANTED UNDER 37 CFR 1.136.

3. ☐ At least one amendment has been filed subsequent to the final rejection, and the brief does not contain a statement of the status of each such amendment (37 CFR 41.37(c)(1)(iv)).
4. ☒ (a) The brief does not contain a concise explanation of the subject matter defined in each of the independent claims involved in the appeal, referring to the specification by page and line number and to the drawings, if any, by reference characters; and/or (b) the brief fails to: (1) identify, for each independent claim involved in the appeal and for each dependent claim argued separately, every means plus function and step plus function under 35 U.S.C. 112, sixth paragraph, and/or (2) set forth the structure, material, or acts described in the specification as corresponding to each claimed function with reference to the specification by page and line number, and to the drawings, if any, by reference characters (37 CFR 41.37(c)(1)(v)).
5. ☐ The brief does not contain a concise statement of each ground of rejection presented for review (37 CFR 41.37(c)(1)(vi)).

See Continuation Sheet.

Primary Examiner, Art Unit 2611

Continuation of 10. Other (including any explanation in support of the above items): under section V. Summary of Claimed Subject Matter, the structure, material or acts described in the specification as corresponding to each claimed function must be set forth with reference to the specification by page and line number, and to the drawing. In this case regarding claim 24, "Fig.1" should be inserted corresponding to the "wireless network" and (p.4, l.14-15) should be inserted to correspond to "exchanging user data and control data with a plurality of terminals...". Regarding claim 26, "Fig.1" should be inserted to correspond to the "wireless network". Also, the examiner notes that the drawings filed 05/05/04 shows figure 5 corresponding to the "receiver" in claim 26 wherein the arrows pointing flow of signals appear to be reversed. Regarding claim 33, "Fig.1" should also be inserted to correspond to the "wireless network". And regarding claim 20, the cited specification (page 8, lines 16-19) appears to lack support of the limitation of "... re-transmit the first signaling sequence ... within a predefined period of time...".
